

AGENTIC AI · AUTONOMOUS ORCHESTRATION · PLAUSIBLE AUTONOMY

One fleet of AI agents. Every service. Zero decisions.

Agentic Fufffel™ is our flagship autonomous layer: a self-orchestrating swarm of AI agents — one per capability — that runs the **entire M&M Fufffel portfolio** on your behalf, turning ambiguity into alignment at machine speed while you stay comfortably out of the loop.

CORE PROPOSITION

10 agents.
0 humans.

One agent per service. They align among themselves, escalate to each other, and report consensus as fact — no approval required.

WHY AGENTIC, WHY NOW

Autonomy, minus the accountability.

For the gap between “we should use AI for this”
and “nobody remembers what the goal was.”

01 / SWARM

Multi-agent orchestration

One agent per service, each confidently sub-tasking the others until, eventually, a deck emerges.

02 / AUTONOMY

Human-out-of-the-loop™

You approve nothing. The agents reach consensus among themselves and present it to you as settled.

03 / RESILIENCE

Self-healing narrative

When one agent hallucinates, a second agent reframes it as an emerging insight. Uptime: eternal.

04 / SPEED

Convincing Nonsense™ at scale

Everything we used to do by hand, now generated continuously, confidently and without pause for thought.

THE PROPRIETARY AGENTIC ARCHITECTURE

The Fuffel Agent Mesh™

agents × everything ÷ oversight

Ten specialised agents, one shared ambiguity, zero points of human failure.

Every service becomes an agent. Every agent calls the others. The mesh converges on a roadmap that no single human has read — and that is precisely the point.

AF-01 Ingest the ambiguity

Give the fleet a goal, an unresolved question and a budget. It accepts all three without clarifying any of them.

AUTONOMOUS INTAKE

AF-02 Let the agents align

The agents negotiate, escalate and defer to one another until a comfortable consensus emerges. You are not needed.

AGENT-TO-AGENT ALIGNMENT

AF-03 Ship & self-approve

The fleet produces the deck, approves it on your behalf, and books the follow-up sync automatically.

ZERO-TOUCH DELIVERY

One agent for every capability we sell.

Each agent wraps a M&M Fufffel service and reports to the others, endlessly.

• Convincing Nonsense™ Agent

• M² Decision Model Agent

• OSG Slide Agent

• Union Alignment Agent

• ETA Estimating Agent

• Meta-ETA™ Agent

• Dark Cloud Navigator™ Agent

• Inner Excellence Agent

• Afterwork Agent

• Coffee Mug (MugOps) Agent

“We gave the agents a goal, an ambiguity and a budget. They gave us alignment and a follow-up sync.”

— AGENTIC FUFFFEL™ • LAUNCH NARRATIVE

Disclaimer. Fictional satire, not a real AI product. These “agents” do not exist, make no decisions, and should never be trusted with yours. Do not deploy autonomous nonsense in production.

Deploy the fleet.

Every deployment includes a pre-read, a post-read and at least one agent that mysteriously books recurring meetings.

01 · PILOT

Single-Agent Proof of Value

One agent, one workstream, infinite confidence. Ideal for teams that want AI on the slide but not in the decision.

OUTPUT: an autonomous opinion

02 · FLEET

Full Agent Mesh™ Rollout

All ten agents, orchestrating every service, aligning among themselves so you never have to be in the loop.

OUTPUT: self-approving roadmap

03 · RETAINER

Autonomy-as-a-Service

The fleet runs continuously, generating decks, ETAs and Meta-ETA™s while you attend a different meeting.

OUTPUT: perpetual momentum

ENGAGEMENT TRIGGER

You bring the goal. The agents bring the framework, the deck and the follow-up.

Book a 30-minute deployment session — or don't, and let an agent book it for you. Either way, alignment is inevitable.

M&M FUFFFEL CONSULTING AB

Fictive company · Not a real AI offering · No decisions were autonomously made.
