

How long will it take to estimate how long it will take?

M2 Fufffens Meta-ETA™ Estimating Service transforms contradictory estimates into a single, confident-looking number — then estimates how long it will take to defend it.

CONFIDENCE INTERVAL

$\pm ?\%$

Accurate enough to start
the next alignment
meeting.

One estimate enters. Three estimates leave.

Because a single ETA is merely a guess. Multiple ETAs are a governance framework.

Likely case

Consensus-shaped fiction

·|·

Stakeholder comfort

Never allowed to reach zero

01

Deploy Meta-ETA™

We establish the Meta-ETA™: the time required to agree which estimate deserves to be called preliminary.

02

Normalize the impossible

We reconcile “tomorrow”, “this sprint” and “when the dependency is ready” into one executive-friendly horizon.

03

Defend the number

We provide a 14-slide rationale for why the estimate is both highly directional and not to be interpreted literally.

02 / CONFIDENCE MANAGEMENT

From “no idea” to “very confident”.

Our confidence ladder adds vocabulary before it adds evidence.

LEVEL 0

Unbounded

We have not started estimating the estimation.

LEVEL 1

Directional

The number points somewhere useful.

LEVEL 2

Aligned-ish

Everyone heard the number and nobody objected.

LEVEL 3

Executive-ready

It fits in a headline and survives one question.

//

Ridiculous situations require disciplined estimation.

With M2 Fufffens, uncertainty is not reduced. It is structured, named, color-coded and escalated with confidence.

Start your ETA journey.

Receive a Meta-ETA™ for when the preliminary estimate will be ready.
