

OPERATIONAL STEERING GROUP REPORTING · AI-ASSISTED · HUMAN-REVIEWED-ISH

# None of us are as **confused** as all of us together.

The OSG Slide Generating Service converts scattered dashboards, shifting criteria and collective interpretation into an executive-ready narrative — **before the next alignment meeting creates three new versions.**

## SERVICE PROMISE

We automate the assembly of the truth. The steering remains human.

Because even the most advanced AI cannot determine who owns slide 21 without creating a working group.

## THE REPORTING PIPELINE

From source sprawl  
to slide-shaped  
clarity.

Four steps. Seven systems. One deck that  
looks like everyone agreed on the definitions.

## 01 / INGEST

## Collect the reality

Connect Power BI, FPT, Confluence, CRAnE, TR Radiator, AQA and any spreadsheet that has survived long enough to become authoritative.

SOURCE ARCHAEOLOGY

## 02 / NORMALIZE

## Map the moving target

Link OSG items to sources, retrieval methods and assessment criteria while pretending the template is stable.

SEMANTIC ALIGNMENT

## 03 / ANALYZE

## Summarize the signal

Generate trends, risks, focus areas and confidence language — calibrated to the amount of data we actually found.

AI-ASSISTED SENSEMAKING

## 04 / RENDER

## Produce the deck

Draft slide-ready charts, tables and narrative blocks that can be reviewed, challenged and renamed before Friday.

EXECUTIVE FORMATTING

## THE TRANSFORMATION

Same complexity.  
Fewer rituals.

We do not promise perfect certainty. We promise a more repeatable way to be uncertain.

## BEFORE • ARTISANAL REPORTING

One report. Twelve interpretations.

---

↳ Manual extraction from multiple platforms

---

↳ Charts copied, pasted and spiritually reinterpreted

---

↳ Assessment criteria negotiated slide by slide

---

↳ Weekly change detected only after the review

## AFTER • SYSTEMATIC REPORTING

One data story. Several defensible views.

---

↳ Reusable reporting Lego blocks

---

↳ Consistent calculations and sanity checks

---

↳ AI-assisted summaries, risks and focus areas

---

↳ Human review focused on meaning, not formatting

## COMPOSABLE BY DESIGN

Build the report once. Rebuild the argument every week.

The service separates data retrieval, assessment logic and slide composition. That way, when the OSG format evolves — as it inevitably will — only the affected Lego brick needs to be renegotiated.

---

**G-01** Human-in-the-loop

AI may draft the sentence. A human still decides whether “challenging” means red, amber or a meeting.

---

**G-02** Traceable-ish outputs

Every important statement should point back to a source, a rule or a person willing to explain it.

---

**G-03** Template humility

The service assumes that no slide is truly final until it has survived at least two stakeholder syncs.

---

“The fastest route to alignment is a **shared deck** — preferably one nobody had to assemble manually.”

---

— OSG SLIDE GENERATING SERVICE · REDUCING COPY-PASTE BASELOAD SINCE THE MVP

---

**ADOPTION TRIGGER**

Bring us your dashboards, your definitions  
and your most emotionally significant  
spreadsheet.

We will return a coherent OSG narrative, a transparent backlog and  
exactly enough AI vocabulary to make the next demo feel inevitable.

**OSG SLIDE GENERATING SERVICE**

Fictive service positioning · Inspired by real reporting pain · No slide owners were harmed in the rendering.
